

Module Details	
Module Title	Design Of Steel And Concrete Structures
Module Code	CSE5012-B
Academic Year	2020/1
Credits	20
School	Department of Civil and Structural Engineering
Subject Area	Civil and Structural Engineering
FHEQ Level	FHEQ Level 5
Pre-requisites	N/A
Co-requisites	N/A

Contact Hours	
Type	Hours
Lectures	40
Tutorials	20
Directed Study	140

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Academic Year

Module Aims
Using first principles and structural Eurocodes to design structural steelwork and concrete elements.

Outline Syllabus
N/A

Learning Outcomes	
Outcome Number	Description
01	analyse and evaluate main reinforced concrete and steel structural elements according to limit state design method.
02	design different reinforced concrete and steel structural elements for serviceability and ultimate limit states.
03	design different reinforced concrete and steel structural elements for serviceability and ultimate limit states.
04	present and interpret data; apply scientific method; develop systematic problem solving; and gain creative problem solving.

Learning, Teaching and Assessment Strategy
Variety of teaching and learning techniques are followed to encourage student learning and engagement (PPT, videos, online tutorials, laboratory, online lectures). The students are provided with a well organised set of lecture notes and tutorial problems available via VLE. Many solved/practical examples produced by professional organisations will be available on VLE. Two computer aided learning design software are available to aid the student learning (CALcrete is a comprehensive suite of 16 computer aided e-learning modules on concrete materials, design and construction, containing essential material and information for all construction professionals - from architects to site engineers and SteelCAL). A set of videos and documentations to help student visualize and understand the behaviour of steel and concrete members are uploaded on VLE. There will be also a comprehensive reading list covering up-to-date books and articles. 2 exams (one at the end of each semester). The assessments will focus on the design of steel and reinforced concrete structural elements. Each exam will be weighted 50%. Past exam papers will be practiced in tutorial sessions.

Mode of Assessment				
Type	Method	Description	Length	Weighting
Summative	Examination - Open Book	Examination Open Book	N/A	50%
Summative	Examination - Open Book	Examination Open Book	N/A	50%

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
