

Module Details	
Module Title	Medical Microbiology
Module Code	BIS5008-B
Academic Year	2021/2
Credits	20
School	School of Chemistry and Biosciences
FHEQ Level	FHEQ Level 5

Contact Hours	
Type	Hours
Lectures	31
Practical Classes or Workshops	3
External Visits	9
Directed Study	157

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Semester 1

Module Aims
To consider the variety and role of pathogenic micro-organisms, and their relationship to disease; provide an introduction to host/microbe interactions in health and disease; consider the culture, identification and characterisation of microbes in relation to the practice of diagnostic microbiology; illustrate the importance of selected pathogens in human health and disease.

Outline Syllabus
Review of the diversity of microbial pathogens; isolation and identification of medically important bacteria and viruses; the normal human flora; epidemiology of infectious disease. Modern diagnostic techniques. Healthcare associated infections; infection control; gastro-intestinal disease; urinary tract pathogens; respiratory tract infections; sexually transmitted infections. Studies on specific bacterial pathogens: <i>Helicobacter pylori</i> , staphylococci, streptococci, spirochaetes, mycobacteria. The host defences against infection, and the immune response to infection. Pathogenicity and virulence factors: toxins and invasion strategies. Antimicrobial chemotherapy of bacterial infections, the evolution of resistance to antimicrobial agents. Medically important fungi. Viral infections and their chemotherapy; latent and persistent viral infections. Concepts in vaccine development and production. Involvement of micro-organisms in cancer.

Learning Outcomes	
Outcome Number	Description
01	1 Understand the diversity of micro-organisms associated with humans in health and disease, including those associated with emerging infections.
02	2 Understand the basic mechanisms of microbial pathogenesis and how infectious disease is diagnosed, prevented and treated.
03	3 Understand the role of the microbiology laboratory in the diagnosis and treatment of infectious disease (HCPC standards 13, 14, 15).
04	4. Identify and use appropriate laboratory techniques to isolate and identify pathogenic bacteria.
05	5 Understand the need for and demonstrate reproducibility in experimental procedures, have knowledge of the use and operation of specialist equipment involved in diagnosis of infectious disease.
06	6 Understand the need to maintain a safe working environment for both yourselves and others in the laboratory.
07	7 Use research reasoning and problem-solving in a logical and systematic way.

Learning, Teaching and Assessment Strategy
The core information required for the knowledge and understanding in this module is delivered via the lectures. Workshops explore the concepts and theories of the epidemiology of infectious disease, and the isolation and characterisation of bacteria and viruses which cause such disease. The practicals will employ a variety of tests to prove the involvement of specific bacteria in infection, and to isolate, identify and characterise these. Reassessment of failed elements will be as per the initial method of assessment. Where reassessment of the practical element is required, students will be given a data set or an opportunity to complete the practical on an alternative occasion, whichever is more appropriate.

Mode of Assessment			
Type	Method	Description	Weighting
Summative	Coursework - Written	Practical assessment in the form of an in-lab test during the third practical session and subsequent question sheet -1hr	20%
Summative	Examination - MCQ	Assessment comprising MCQ and eMCQ to be done under exam conditions on campus (1 Hr)	30%
Summative	Team-Based Assessment	Group based case studies assessment (2 Hrs)	20%
Summative	Long-Time Limited Online Examination	One essay from a limited choice to be written and submitted through Canvas (32 hours)	30%

Reading List

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
