

Module Details	
Module Title	Inorganic Chemistry 2 (at Distance)
Module Code	CFS5024-B
Academic Year	2021/2
Credits	20
School	School of Chemistry and Biosciences
FHEQ Level	FHEQ Level 5

Contact Hours	
Type	Hours
Interactive Learning Objects	24
Online Lecture (Synchronous)	16
Directed Study	149
Online Tutorials (Synchronous)	8
Online Seminar (Synchronous)	3

Availability	
Occurrence	Location / Period
DLA	University of Bradford / Academic Year

Module Aims
The module aims to build on stage 1 theory and develop an understanding of the structures and reactivity of the main group elements and transition metals, including the principles of coordination chemistry and organometallic chemistry. This will allow for further understanding of periodic trends and reactivity, with a more in depth understanding of applicable spectroscopic techniques. The chemistry of organometallic complexes will be discussed in terms of metal to ligand bonding, with introduction to Molecular Orbital theory of the d-block metals. Importantly, the chemistry of metal-carbon bonds, s-bonding and p-bonding and their importance in the chemistry of carbenes and catalytic reactions will be discussed. The students transferrable skills will be developed by working in groups to describe and communicate a variety of topics relating to coordination and organometallic chemistry.

Outline Syllabus

The module aims to build on stage 1 theory and develop an understanding of the structures and reactivity of the main group elements and transition metals, including the principles of coordination chemistry and organometallic chemistry. This will allow for further understanding of periodic trends and reactivity, with a more in depth understanding of applicable spectroscopic techniques. The chemistry of organometallic complexes will be discussed in terms of metal to ligand bonding, with introduction to Molecular Orbital theory of the d-block metals. Importantly, the chemistry of metal-carbon bonds, s-bonding and p-bonding and their importance in the chemistry of carbenes and catalytic reactions will be discussed. The students transferrable skills will be developed by working in groups to describe and communicate a variety of topics relating to coordination and organometallic chemistry.

Learning Outcomes

Outcome Number	Description
01	Determine and explain nomenclature, coordination numbers, chemical composition and chemical structures of coordination and organometallic compounds.
02	Apply Crystal Field and Ligand Field Theories to understand and predict electronic and magnetic properties of compounds.
03	Predict and discuss the stability and reaction mechanisms of coordination compounds.
04	Determine the electron counts, oxidation states and metal-ligand bonding in coordination and organometallic compounds.
05	Describe the bonding of metals to s and p ligands and demonstrate this with use of atomic and molecular orbital theory.
06	Identify and rationalise metal-metal bonding and metal-carbonyls in clusters chemistry, and predict the shapes using Wade's rules.
07	Construct catalytic cycles to illustrate the applications of inorganic and organometallic compounds in catalysis.
08	Use scientific literature databases, appraise primary literature and prepare a scientific presentation.
09	Use effective teamwork skills to analyse and evaluate key coordination and organometallic theory and concepts.

Learning, Teaching and Assessment Strategy

The core content will be delivered by lectures and will build on the fundamental knowledge of inorganic chemistry taught in stage 1. This will be supported by tutorial sessions where students will be asked to work in small groups to solve problems based on critical thinking. This will help in peer-learning activities. Formative feedback will be given at the end of these activities. In semester 2, students will be assigned to different groups to design and present a presentation to the cohort in a seminar style. Each group will be given a different core topic which covers different key concepts from the module content.

The discussion forum in the VLE will be used to encourage peer learning activities with regular monitoring of the discussion threads by the module instructor. The participation in discussions will be assessed with respect to quality of contribution (questions, discussions, and answer).

Assessment 1: A seminar style presentation and online forum discussion based on the questions and answers using the VLE platform will cover LO's: 8-9.

Assessment 2: An examination in January will cover LO's: 1-3.

Assessment 3: A summative examination at the end of the module to cover LO's: 1-7.

Mode of Assessment

Type	Method	Description	Weighting
Summative	Presentation	On-line presentation (12 Mins)	30%
Summative	Examination - Closed Book	Summative exam, Closed book (2 Hrs)	40%
Summative	Online MCQ Examination	On-line assessment (1.5 Hrs)	30%

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
