

Module Details	
Module Title	The Assessment and Management of Binocular Vision
Module Code	OPT5008-B
Academic Year	2021/2
Credits	20
School	School of Optometry and Vision Science
FHEQ Level	FHEQ Level 5

Contact Hours	
Type	Hours
Online Lecture (Asynchronous)	48
Practical Classes or Workshops	10
Directed Study	124
Seminars	20

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Academic Year

Module Aims
To develop an understanding of the normal and abnormal development of binocular vision and to enable students to apply this understanding in the clinical evaluation and management of patients with binocular vision dysfunction.

Outline Syllabus
Spatial localisation and stereoscopic vision. Clinical assessment of stereopsis. The identification and measurement of ocular deviations using objective and subjective methods. Evaluation of the motor control of ocular deviations. Measurement of vergence. Fixation disparity and associated phoria. The near vision complex and AC/A ratio. Sensory adaptations to strabismus. The classification and management of concomitant ocular deviations. Characteristics and investigation of incomitant strabismus and its optometric management. Introduction to nystagmus and neuro-ophthalmology. Development of binocular vision and the consequences of its abnormal development. Amblyopia. Paediatric optometry: managing the child patient; children's tests.

Learning Outcomes	
Outcome Number	Description
01	Describe the basic principles of normal development of binocular vision.
02	Explain anomalies of visual development.
03	Describe the incidence and demographics of binocular vision anomalies.
04	Identify and classify anomalies of binocular vision.
05	Analyse clinical information from binocular vision tests and formulate appropriate tentative diagnoses.
06	Analyse clinical information from binocular vision tests and formulate appropriate management options for patient care.

Learning, Teaching and Assessment Strategy
The module is based on a lecture series and supported by online material. 1. The fundamental principles relating to the assessment and management of binocular vision anomalies are covered in formal lectures and seminars. 2. Practical classes are used to develop basic skills and assess competence in fundamental clinical examination techniques. In order to provide exposure to the appearance of a variety of binocular vision anomalies the interpretation of video recordings of patient examinations is used.

Mode of Assessment			
Type	Method	Description	Weighting
Summative	Computerised examination	Closed book computerised examination at the end of the module (2 Hrs)	100%
Summative	Coursework - Portfolio/e-portfolio	Clinical portfolio of evidence of clinical experience and skills (cont. under Outline Syllabus) - PASS/FAIL	0%

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
