

Module Details	
Module Title	Design, Build and Test (Mechanical)
Module Code	MAE4013-B
Academic Year	2022/3
Credit Rating	20
School	Department of Mechanical and Energy Systems Engineering
Subject Area	Mechanical and Automotive Engineering
FHEQ Level	FHEQ Level 4
Pre-requisites	
Co-requisites	

Contact Hours	
Type	Hours
Lectures	11
Seminars	9
Practical Classes or Workshops	38
Laboratories	3
Tutorials	9
Directed Study	130

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Academic Year

Module Aims
(1) To develop problem-solving skills through applied project work. (2) To develop team working - both discipline specific and interdisciplinary, time management and communication skills. (3) To introduce experimental techniques in engineering and technology. (4) To develop understanding of professionalism, engineering ethics and sustainability.

Outline Syllabus
Students will study topics directly relevant to the three projects pertinent to Mechanical Engineering. In addition, the module establishes professional skills with supplementary lectures/workshops on: rapid sketching, health and safety, project management, time management, team building, financial management, sustainability, engineering ethics, presentation skills, and technical report writing including searching for and referencing information. Mechanical Engineering students will also undertake a series of practical Engineering Production Techniques (EPT) workshops.

Learning Outcomes	
01	Explain the design process as applied to simple engineering systems, critique a solution and recognise opportunities for design improvements
02	Analyse the role of health and safety, professional conduct and engineering ethics in the design and development of an engineering product

03	Apply knowledge of the principles of sustainability on the basic design methods for the analysis and solution of simple engineering problems.
04	Effectively utilise appropriate laboratory equipment, computer software and instrumentation in order to accomplish the objectives of a project in a safe working environment
05	Participate effectively in the operation of a team and collaborate effectively with members of the team.
06	Deliver a paper or presentation that succeeds in communicating effectively with members of the team.
07	Analyse data using appropriate tools and techniques

Learning, Teaching and Assessment Strategy

The Learning strategy is to develop skills and knowledge through active learning activities, in line with CDIO principles. The learning strategy harnesses active learning and experiential learning is a key driver.

As part of their practical experience within the module, students will undertake a series of five practical Engineering Production Technique (EPT) workshop sessions which will embed skills and knowledge of manual and automated manufacturing methods that are used in modern and advanced engineering. Knowledge of these skills and techniques will help to underpin the manufacturing decisions that students make within this module and throughout their academic journey and beyond.

The interactive workshops will focus on critical aspects designed to help students understand fundamental concepts in engineering and solve real-world problems in discipline specific topics as well as interdisciplinary aspects of engineering. They include basic concepts of design and manufacturing, relevant mathematical modelling, materials, and other technologies as appropriate for the projects.

Prototypes will be constrained by a limited budget and students will be able to use given materials and tools (hardware and software) to realise the projects. The systems required for the projects will be conceived, designed and specified by the Student Groups, using the restricted list of components. The systems will then be manufactured by students and Technical Staff. Groups will be selected to include mixed gender, ethnicity and technical ability and will vary from one project to another. Furthermore, groups in the interdisciplinary Project 3 will include students from all four disciplines. Student assessment will be directly linked to each of the projects. Each group project will be assessed based on the effectiveness of the project to meet the project brief, design quality and

build, with a detailed justification of design, materials, and manufacturing methodologies taking into account ethical and sustainability implications of the project. Students will need to demonstrate lessons learned in all aspects of the work during the presentation stage. A peer evaluation, formative and summative, of participation and commitment to the projects will form part of the assessment.

The module will be taught through a series of design and build challenges supported by targeted online interactive workshops. Each student will complete 3 group projects over two semesters. The first two projects will be discipline-specific and the third project will be a common interdisciplinary project shared with all Engineering disciplines. The project briefs may vary from year to year.

This module satisfies the below Learning Outcomes as specified by the Accreditation of Higher Education Programmes: Fourth Edition (AHEP4) as published by the Engineering Council in-line with the UK Standard for Professional Engineering Competence (UK-SPEC). These outcomes specify five key areas of learning which partially (C) or fully (M) meet the academic requirement for CEng registration: Science and Mathematics (1), Engineering Analysis (2-4), Design and Innovation (5-6), The Engineer and Society (7-11), and Engineering Practice (12-18). They include: M1, C1, C2, M4, C4, M5, C5, C7, M12, C12, M13, C13, M16, C16, M17, C17, M18, C18. Further details of these learning outcomes can be found at <https://www.engc.org.uk/ahep>

Mode of Assessment				
Type	Method	Description	Weighting	
Summative	Examination - practical/laboratory	Project 1 (20 Mins)	20 mins	20%
Summative	Examination - practical/laboratory	Project 2 (20 Mins)	20 mins	40%
Summative	Examination - practical/laboratory	Project 3 (20 Mins)	20 mins	40%
Referral	Coursework	Coursework; Individual evaluate report on project 1 (1000 words); (20%)		20%

Referral	Coursework	Coursework; Individual evaluative report on Project 2 (2000 words); (40%)		40%
Referral	Coursework	Coursework; Individual evaluative report on Project 3 (2000 words); (40%)		40%

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
